

Venice Regional Medical Center

Orthopedics and Neurosurgery

Orthopaedics is the branch of medicine concerned with injuries and other disorders of the musculoskeletal system. Orthopaedic surgeons address most musculoskeletal ailments including arthritis, trauma and congenital deformities using both surgical and non-surgical means.

A private orthopedics and neurosurgery unit opened recently at Venice Regional Medical Center to provide joint replacement and neuro patients a specialized, comfortable place to recover.

General Services

The Department of Orthopaedic Surgery at Venice Regional Medical Center will provide patients with the most advanced medical and surgical care and the greatest expertise available today to address their orthopaedic health care needs.
